### **DETAILED ACTION**

The following is a response to the request for reconsideration received on November 3, 2005.

#### ***Response to Arguments***

Claims 1-21 are pending in the application. Applicant's arguments, see pages 7-9 with respect to the Tabata et al ('090) reference not disclosing a shifter shaft position sensor and having the controller control the engine when an upshift is about to occur have been fully considered and are persuasive. The 103(a) rejection of claims 1, 2, 4, 8, 13, 14, 15, 18 and 21 has been withdrawn.

#### ***Allowable Subject Matter***

Claims 1-21 are allowed. The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or render obvious a motivation to provide for:

-(as to claim 1) an engine control system wherein when a clutch is at least partially disengaged and an upshift is about to occur, a controller transitions the engine from an activated to deactivated mode and in combination with all the remaining limitations of claim 1.

-(as to claim 8) a method for controlling transitions between an activated and deactivated modes of an engine wherein the transition occurs when a clutch is at least partially disengaged and an upshift is about to occur and in combination with all the remaining limitations of claim 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
